Manya Jain WNBAnalytics	Urgent	Not Urgent
Important	• Read player box score data from my own CSV file • Model Player and BoxScoreLine classes to store and organize the data • Calculate true shooting and effective field goal • Write command line menu to look up a single player's stats • Compare two players side by side	• Add usage rate of the player selected • Calculate the Player Efficiency Rating • Sort or rank players by any stat • Sort by team or by another metric • Export comparison results to a text or CSV file
Not Important	• Parse data using Gson or Jackson instead of writing a separate parser • Use Apache Commons CSV for CSV parsing • Use JUnit to test the formula's accuracy • Use a charting library like JFreeChart to graph the stats as a visualization aspect	• Updating CSV files for real-time data • Creating a whole GUI or an app with user logins • Using player comparison for predictions • Video or shot-tracking analysis
